Skills

Languages: C#, Java, SQL, HTML, CSS

Technologies: Git, SQL Server, MySQL

Projects

University Application

- Created a Windows Forms application using C# and SQL Server to model a university.
- Utilized the repository pattern to create a multitiered architecture involving UI, business, and data layers.
- Used interface driven development to enable enrollment for new students, course registration, and gpa calculation.

Bank Program

- Developed a bank application using Windows Presentation Foundation, C# and SQL servers.

Vehicle Dealership

- Designed a vehicle dealership program using Java that allows the user to view the inventory and purchase vehicles.

Dungeon

- Used test driven development to create a Java command line based game where the user must destroy all vampires to win.

Phone book

- Created a Java program to store contact information of friends and family.

Quiz app

- Designed an android application using Java that simulates a quiz with various questions for the user to answer.

Graphical BMI Calculator

- Implemented a BMI Calculator using JavaFX and CSS.

Tic Tac Toe

- A Java program that allows the user to play a game of tic tac toe against the computer.
